But that does not mean that I have not been studying and praying. In January I had an opportunity to go to Saudi Arabia. This was an amazing trip. I had never been there before, and it was my first time in Saudi Arabia. I visited Makkah for three days. I was so blessed to see the Holy Kaaba and the place where the Prophet Muhammad and the other prophets lived and died. It was a moving experience. I have never been in a place that was so holy and spiritual. It was also a wonderful time to study how to be a servant of the Most High. While in Saudi Arabia, I spent a day with Sheikh Abdul Aziz. Version Control: Automatic and efficient version control for your drawings makes it easy to see when and how a change has been made, while providing the option to review past changes without committing them. Use a recent version control interface for easy access and/or configure your own. **Repetitive Drawing:** Automatically create repetitive blocks and objects from your designs. Automatically define repeated versions of blocks and objects such as window styles, tools, primitives, text styles and symbols. You can also apply multiple designs to a single block. **More Powerful Layer Settings:** Settings you make in a layer now affect not just that layer, but any other layer that uses that style or template. You can create templates that can automatically apply settings to all of the layers in a drawing. **Preview:** Add the ability to simultaneously view the outline and display style for any shape in the drawing. Preview your shapes on any layer. You can also review other layers, like blocks and text styles. **Geometry Template:** Create multiple variants of your block shapes. This includes new primitives and defined layers for irregular shapes that extend the same way on all blocks in the drawing. The new Geometry Template works with the existing System Template and Geometry Manager templates. **Greater Control of Annotations:** Manage and display annotations with automatic behavior for automatically displaying annotations on different layers, as well as when you import external drawings. You can also create your own templates to control the display of annotations and control how they interact with other types of annotation such as measurements. **Content from multiple sources:** You can add content from multiple locations to a drawing, including images, documents, PDFs and external drawings. **Collaboration:** Share your work in progress. From within the drawing, you can send and receive your colleagues' comments on your drawings. When others send comments to you, they are available as a comment that you can review and then send back with your feedback. **Editor Enhancements:** Increase your productivity by integrating your changes with the Projector. Also, specify how you want the Projector to interact with objects and workflows. **Improvements to Text:** Text editing is faster and smoother than ever before, allowing you to change the font and size and apply text to blocks, text styles and shapes with one simple action.
